

KE-155 RC Pink Spice ENZYME TOILET BOWL SYSTEM

KE-155 RC With Enzymes is a complete toilet maintenance system in a disposable one-piece unit. So unique a patent has been issued, U.S. Patent #5,336,424.

Each time the fixture is flushed, a pre-measured amount of chemical compounds, enzymes and powerful cleansers are released that descale, delime, deodorize and maintain the toilet and drain lines. KE-155 RC With Enzymes attacks fixture odors two ways: by removing the source of the odor, uremic salts that accumulate in the drain, and by dispensing a mild, pleasant scent. KE-155 RC With Enzymes also helps keep the drain lines clear and free-flowing by depositing a micro-thin coating that seals and protects, and by releasing an enzyme that digests organic materials. KE-155 RC With Enzymes lasts an average of 30 days, under normal conditions, due to its unique design that protects the chemical block from excessive erosion caused by rushing water as well as debris dropped into the fixture.

CONTAINS:

Didecyl Dimethyl Ammonium Chloride, Phosphoric Acid, Acid Stable Protease.

DIRECTIONS FOR USE:

Clean the fixture, then place the KE-155 RC With Enzymes on the toilet rim with the exposed face of the chemical block facing towards the fixture. KE-155 RC With Enzymes should not be placed so that it is completely submerged in water as this will drastically cut down on its effective life. Replace when the chemical block is depleted.

CAUTION: KEEP OUT OF REACH OF CHILDREN. Mild eye and skin irritant. Harmful if swallowed. Causes eye and skin irritation. Do not get in eyes, on skin, or on clothing.

FIRST AID:

If Swallowed — Do not induce vomiting. Drink large quantities of water and get prompt medical attention.
If in Eyes — Flush with water for 10-15 minutes. If irritation persists, contact a physician.
If on skin — Wash off with soap and water. If irritation persists, contact a physician.

NET CONTENTS: 3.5 OZ./100 g (PER UNIT)
