

KE-26DSR

SALT REMOVER AND NEUTRALIZER CONCENTRATE

KE-26DSR Liquid Concentrate effectively removes salt residue from pores in metal and other surfaces to prevent rust and corrosion.

Salt removal with KE-26DSR will save substantial time and money versus treatment after rust and corrosion has started. Simply washing the salt off with water is ineffective. Even with pressure washing, a film of salt residue clings to pores in the surface and continues the corrosive process. The salt residue also prevents reliable top coat adhesion on all surfaces.

The salt molecule NACL, is the target of KE-26DSR. Regular application for salt removal will ensure longevity of all equipment that is exposed to salt. The salt remover can be employed to remove salt no matter how thick the deposit.

D.O.T. Equipment:

Salt spreaders, snowplows, truck boxes and chassis can be treated regularly with KE-26DSR for maximum longevity. Any surface exposed to road salt should be treated with a salt remover. Garage and workshop floors will also retain salt residue and should be treated with our KE-26DSR concentrate.

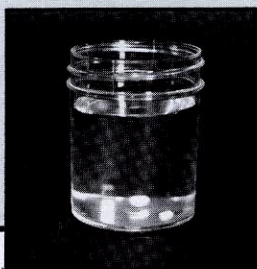

Marine Engines:

Marine engines and drives in all configurations benefit from our KE-26DSR for removing salt, corrosion control and corrosion prevention, especially inside water jackets in cylinder heads, engine blocks and open salt water cooling systems.

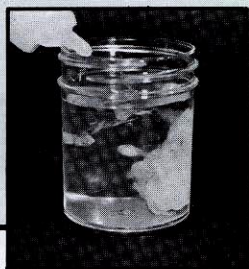

Salt Water Evaporators and Equipment for Fresh Water:

This equipment can be cleaned of salt residue for corrosion control and prevention using KE-26DSR salt remover/salt neutralizer concentrate.

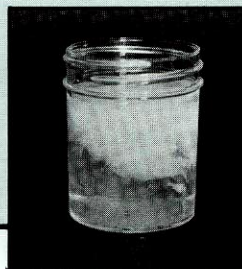

SEE HOW EASILY **KE-26DSR DEMO** NEUTRALIZES ICE MELT CHEMICALS

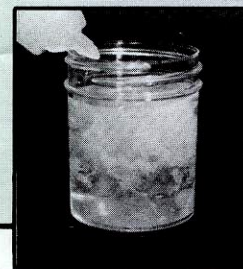

Fill jar with water, add 1 or 2 pellets of ice melt, replace cap and shake. The residue of this solution is bad enough on your floor, but ...

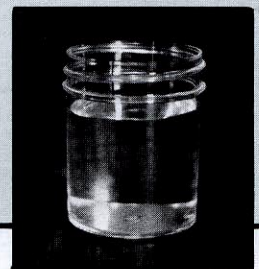

Look what happens when you try to remove the film with an ordinary cleaner ... Squirt a stream of cleaner into the dissolved ice melt.

Note the sticky coagulate produced by the mixture of ice melt and cleaner. This is what dries to such a hard to remove film on your floors.

Now see how easily this compound can be neutralized ... Squirt a stream of **KE-26DSR** into the jar — and like magic ...

The solution becomes perfectly clear again ... You can see how easily ice melt film can be removed, leaving your floors sparkling clean.
