

KE-98C

LIQUID ICE PREVENTER

PRODUCT DESCRIPTION: Liquid freezing-point depressant to help prevent ice formation.

DILUTION: Ready to use.

USES: Spray, sprinkle, or pour on surfaces such as machinery, locks and equipment.

DISCUSSION: Applied prior to lunch hour, evening or weekend shutdown, **KE-98C** will prevent “freezing” and permit the start up of machinery without delay. It effectively prevents ice from bonding and adhering to surface previously coated.

When applied to frozen surfaces or parts, **KE-98C** begins to melt ice immediately. It will free even the “most frozen” joint within minutes.

KE-98C is manufactured and recommended primarily industrial use and prevents moving parts from freezing-up.

FURTHER INFORMATION: **KE-98C** will not damage iron, steel, aluminum, copper, brass or magnesium.

DIRECTIONS:

Wipe grease, oil and loose dirt from surface or part to be treated.

Spray on – using an ordinary household spray gun or pressurized tool. Be sure “sprayed item” is thoroughly coated. If more convenient, liquid may be poured on frozen joints or parts.

KE -98C is food grade and safe to use.
