

FLY-ZYME

Ultra-Strength Drain Treatment Eliminates Drain Fly Breeding Areas And Food Sources

Drain flies are a common health hazard. These small insects closely resemble fruit flies and breed in the decaying organic matter typically found in "p" traps, grease traps, floor drains and sink drains. Drain flies cannot be eliminated unless you remove their food source and egg-laying environment.

Fly-Zyme is a thickened concentrated gel that clings to pipes and traps, coating the organic material. aerobic and anaerobic bacteria strains rapidly multiply as they digest the food source, doubling in number every 20 minutes, until the food source is gone.

Fly-zyme can be used in restaurants, bars, kitchens, or wherever organic matter is present in drains. It contains no insecticides or poisons, uses non-pathogenic bacteria and is certified Salmonella-free.

Directions:

For best results, treat every drain with 6 oz. of Fly Down daily for 5 days, then weekly thereafter. This is only a suggested starting point, but should be effective in most situations.
