

KE-135Q

KE-135Q is a "True Deodorant" in that it eliminates odors, and doesn't simply cover them up with a nice fragrance. **KE-135Q** contains a chemical molecule that is concave in shape and blends perfectly with many "foul-odor" molecules such as sulfides, amines and mercaptans. Once the **KE-135Q** molecules trap and attach to the "bad guys", the newly formed molecule has a different structure and is no longer an offensive odor. Only foul odors are effected by this chemical change, leaving fresh, pleasant fragrances untouched.

KE-135Q is effective on many foul odors, but extremely effective on cigarette and cigar odors.
