

SCRUB BUGS

The Cream Cleanser with Enzymes!!

ONLY AVAILABLE IN QUARTS

Scrub Bugs -- The "Soap Scum Remover"

Now, there is a Cream Cleanser that does much more than simple surface cleaning. Scrub Bugs works from an Alkaline base, making it the perfect cleanser for removing Soap Scum. Add to that a mild abrasive to cut through most dirt and grim, plus a very effective Odor Counteractant to eliminate any foul odors in the area, plus the lingering after effects of Enzyme producing Bio-Cultures that enter the drain and digest organic materials that cause mal-odors and clog drain lines. Put all that together and you have Scrub Bugs--simply the best cream cleanser on the market.

Most every other cleanser on the market is an "acid" base, which will not remove soap scum. Scrub Bugs, with it's unique Alkaline base liquefies soap scum, allowing it to be rinsed down the drain. Scrub Bugs also uses a very mild abrasive, which when used with water, can be used on Plexiglas.

Scrub Bugs works Wonders on Stainless Steel!!

Scrub Bugs have many daily applications, for showers, sinks, tile, and most other hard surfaces. But when used on Stainless Steel surfaces, such as drinking fountains or hospital therapy tanks, Scrub Bugs really "Shines". Not only does it clean and polish, but the enzyme bio-cultures enter the drain and remove odor causing organic materials and promotes free flowing drainage.

Scrub Bugs works well as a bowl cleaner for toilets and urinals. No acid, so it is safe for fixtures and people.
