

# KE-59BL5

## MICROBIAL BLOCK

### Automatic Microbial Lift Station Treatment

## 4.3 Trillion Living Bacterial Organisms Per Block

Like all **Kinzua Enzyme** products, **KE-59BL5 BLOCK** contains a mixture of bacterial spores, enzymes, and other important ingredients. As a solid, it is a dried, blended mixture of microbial spores, enzymes, growth medium, fragrance, and dye.

**KE-59BL5 BLOCK** is a concentrated, commercially pure culture of bacilli dispersed in a block of organic base. It will dissolve gradually in lift stations and grease traps. Storage in high-moisture environments will not affect the viability of the organisms or enable growth of contaminants.

Applicable for use in lift stations and grease traps, primarily in:

- sewage treatment
- janitorial/sanitation

That's because the bacteria contained in **KE-59BL5 BLOCKS** are active in consuming and mineralizing almost any hydrocarbon waste. And because they are resistant to extreme conditions, they may be effectively applied into some circumstances which can kill the naturally-occurring bacteria.
