

# ***KE-159D***

## ***FOAMING ROOT REMOVER***

***FOR MUNICIPAL SEWERS &  
STORM DRAINS***

***ALSO TOILET PLUMBING***

This product provides a simple and inexpensive means of removing from sewers obstructions which have penetrated the joints of underground conduits. This product is easy to handle and add at the manholes of municipal systems and through toilets of plumbing connections.

### ***MUNICIPAL SEWERS AND STORM DRAINS***

Inspection of manholes will reveal a section of sewer that is becoming clogged. Normal levels in the manhole will be covered at such times. During periods of maximum flow inspection will show levels above those of normal elevation. Add this product to the nearest manhole up stream from stoppage point. Choose the time of lowest flow, and pour several gallons into the manhole. This product will form a solution with the sewage that will carry down stream to the point of stoppage. At the point of stoppage, the solution is slowed and pooled around the obstructions giving the chemical opportunity to attack the obstructions.
