

KE-99

LIQUID SALT ADDITIVE

Product Description:

Calcium chloride based additive for rock salt or cinders

Dilution:

Ready-to-use at the rate of **1/2 to 1 gallon per 300 to 400 lbs.**

Uses:

This product is not intended to be an ice melter itself, but is to be added to rock salt or cinders as the truck is being loaded, to help activate the salt or cinders to work at lower temperatures and to keep the salt and cinder particles from freezing together or to the truck bed. Read the entire label for complete cautions and directions.

Discussion:

Practically, rock salt is effective to only **10 F to 15 F**, so when temperatures are very low the salt does not perform adequately. By blending in **KE-99B SALT ADDITIVE**, which is practically effective to **-25 F**, the improved mixture allows the salt to work below the **10 to 15 F** range. The **KE-99** acts as a starter, by generating heat as it dissolves and creating a brine to initiate snow and ice melting; the rock salt is then able to complete the process. **KE-99** also helps to prevent cinders or salt from caking to truck beds due to freezing, so that all the deicer is used and not wasted. The product is effective and economical, with as little as **1/2 to 1 gallon per 300 to 400 lbs. of Rock Salt.**

Regulatory Profile:

DOT: Material is not classified as hazardous
Phosphate Content: None

Typical Product Data:

(not to be considered as specifications)
Appearance: Blue Liquid
Density: Approx. 60 lb/cu ft
Flash Point:
Water Solubility: Complete
Viscosity:
pH (as is): 9.4
