TRIPLE THREAT FOAMING SELECTIVE HERBICIDE BROADLEAF WEED CONTROL

KE-192BL

AEROSOL OFFERS ACCURATE SPOT WEED CONTROL

KE-192BL FOAMING SELECTIVE HERBICIDE is a rare product. It is one of only a handful of aerosol herbicides available. Using a special high intensity actuator, **KE-192BL** easily and accurately applies herbicide onto weeds without affecting surrounding desired plants. And because it's a selective herbicide, it only kills unwanted weeds without harming most ornamental plants and grasses. **KE-192BL** is formulated with three potent ingredients — MCPP; 2,4-D; and 2,4-DP non-volatile amine salts — which give it the power to eliminate over 140 different broadleaf weeds such as:

dandelions • clover • chickweed • morning glory
cocklebur • pigweed • dog fennel • tumbleweed
ground ivy • lambs-quarter • wild onion • poison ivy

One application will kill most weeds in just three to five days. Plus, **KE-192BL** sprays as a thick foam to help you track the area you cover and thus avoid overapplication.

KE-192BL FOAMING SELECTIVE HERBICIDE features and benefits:

- ▶ high-intensity actuator accurately applies herbicide on weeds without hitting desired decorative plants
- ▶ special selective formula kills over 140 broadleaf weeds
- ▶ single application eliminates weeds within 3 to 5 days
- ▶ foaming spray shows coverage to avoid overapplication
- ▶ available in 23 oz. aerosol cans
